Attention: Order-specific article – returns not permitted!

The air duct silencer (with a wall thickness of 30 mm) developed by REVENTA® significantly lowers the sound emissions. There are increasing problems with sound emissions when using pressure-stable fans in connection with bio filters and exhaust air treatment systems. Here, REVENTA® offers the TÜV-tested silencer as a solution. Output values and installation dimensions are specified below. We would be happy to advise you!

The measurement results prove that the use of a duct silencer can lead to a noise level reduction of up to 12 dB(A).

Total length: 2,500 mm

Product advantages

- Current **test report of TÜV Nord** shows a reduction of the sound power level of up to 12 dB(A).
- Can be retrofitted to existing exhaust air duct systems.

Measurement results of the air duct silencer

ø (inner) / mm	Level reduction through duct silencer dB(A)
730	11.0
920	11.0

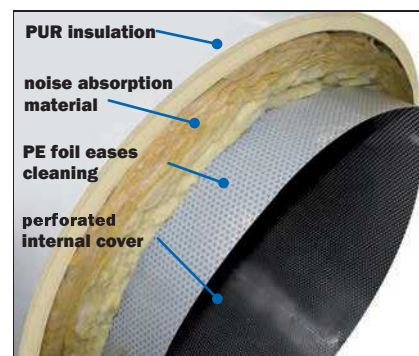

TÜV report

On request, we would be happy to send this to you.

Image showing use in practice

Cross section of the air duct silencer

3 dB(A) already means a halving of the perceived volume.
